

PhonePe UPI Transaction Insights – Report

Project Summary

This project analyzes **UPI transaction data across India** from the [PhonePe Pulse](#) GitHub repository. It extracts national-level transaction metrics using raw `.json` files and presents visual insights using Python and Streamlit.

Tools Used

- Python (Pandas, Plotly, SQLite)
- Google Colab (data extraction & cleaning)
- Streamlit (interactive dashboard)
- GitHub (source data from PhonePe Pulse)

Extracted Files

File Name	Description
<code>final_aggregated_data.csv</code>	Cleaned transaction data (year/quarter/type)
<code>top_transaction_types.csv</code>	Ranked transaction types by amount
<code>quarterly_trend.csv</code>	Quarter-wise national transaction trend
<code>phonepe_data.db</code>	SQLite DB for SQL-based queries

Key Insights

- **Top transaction type:** Peer-to-peer payments
- **Total value of transactions:** ₹{df['amount'].sum():,.2f}
- **Total number of transactions:** {df['count'].sum():,}

Features

- National-level interactive filters (Year + Quarter)
- Dynamic Pie, Bar, and Line charts
- SQLite database integration
- Downloadable CSVs for report sharing

Future Enhancements

- Add state/district-level maps
- Include user growth & insurance data
- Build login-based dashboard or deploy on Streamlit Cloud
